GNU nano 2.3.1 File: /etc/elasticsearch/elasticsearch.yml Modified
# ===== Elasticsearch Configuration =====
#
# NOTE: Elasticsearch comes with reasonable defaults for most settings.
# Before you set out to tweak and tune the configuration, make sure you
# understand what are you trying to accomplish and the consequences.
#
# The primary way of configuring a node is via this file. This template lists
# the most important settings you may want to configure for a production cluster.
#
# Please consult the documentation for further information on configuration options:
# https://www.elastic.co/guide/en/elasticsearch/reference/index.html
#
# ----- Cluster -----
#
# Use a descriptive name for your cluster:
#
# cluster.name: ostim_elk_stack
#
# ----- Node -----
#
# Use a descriptive name for the node:
#
# node.name: elk_masternode2
#
# Add custom attributes to the node:
#
# node.attr.rack: r1
#
# ----- Paths -----
#
# Path to directory where to store the data (separate multiple locations by comma):
#
# path.data: /data
#
# Path to log files:
#
# path.logs: /data/logs
```
